

The new LifeAct™ family of non-lethal self defense units from Kimber® will dramatically change what law enforcement and military professionals expect from products in this class. They effectively outclass conventional aerosol sprays that cause greater cross-contamination and are often not powerful enough to stop an attacker either immediately or at a safe distance.

The Jet Protector JPX is a recharging pistol-size unit ideal for crowd control situations. Propelled at 270 mph by a pyrotechnic charge, large payloads of agent have an effective range of 21 feet and reach that distance in less than one second. The agent travels with enough force to penetrate many types of face masks or wrap around goggles and glasses. Incorporating a traditional pistol design, the Jet Protector JPX is simple to use. It has a double action trigger that immediately indexes, ready to fire the second charge. A Picatinny rail is included for flashlight mounting, and a version is available with an optional laser sight.

The Jet Protector JPX can be purchased wherever the Guardian Angel is sold, including directly from Kimber at (800) 880-2418 or [www.kimberamerica.com](http://www.kimberamerica.com).

Purchased on: \_\_\_\_\_  
 Replace unit on: \_\_\_\_\_

Keep this in a safe place for your records. Replace your Guardian Angel unit on or before the expiration date on the tin.

To purchase a Guardian Angel, visit one of 2,000 Kimber Master Dealers across America, or order direct at [www.kimberamerica.com](http://www.kimberamerica.com)

**Effects**

Capsicum, or oleoresin capsicum ("OC") is an extract of the cayenne pepper plant. OC is the most effective inflammatory agent available today, and is successfully used by law enforcement professionals as well as military and security personnel around the world. OC has proven superior to both CS and CN tear gas when used against assailants under the influence of drugs or alcohol, as well as against psychotics.

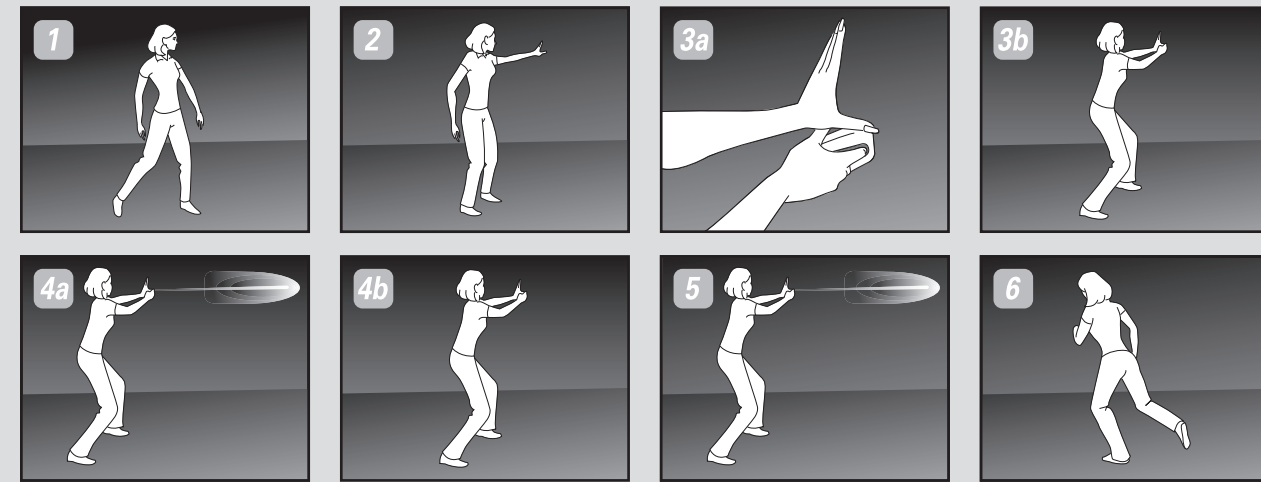

The inflammatory agent discharged from the Guardian Angel is immediately effective upon contact with the face of an aggressor. The OC works rapidly as an inflammatory agent to the eyes, skin, mucous membranes and respiratory system. The results may include temporary blindness (shutting of the eyes), coughing and/or shortness of breath, possible nausea, extreme burning sensation of the face and other sensitive skin areas.

When optimally effective, the eyes of the aggressor immediately shut, and the high velocity of the OC burst ensures that the agent will penetrate behind eye glasses, through cloth face masks and other masks with eye openings. Symptoms may last for up to 60 minutes with no after-effects.

**First Aid**

Remove contact lenses and contaminated clothing. Flush contaminated area with large amounts of cool water and expose area to fresh air. Do not apply salves, creams, oils or lotions as they can trap the inflammatory agent against the skin and may prolong recovery. Symptoms disappear in about 60 minutes. If symptoms persist or worsen, SEEK MEDICAL ATTENTION IMMEDIATELY. Contaminated clothing should be washed prior to re-wearing to prevent irritation.

**Instructions for Use**

1. If confronted with a threat, take one step back and adopt a stable, firm position (a power position).
2. Ready the Guardian Angel for immediate use (in your right hand if right handed) keeping it hidden if at all possible. Extend your other arm toward the threat with hand up, creating an arms-length safety distance. Shout "STOP!" to give the assailant the opportunity to move away.
3. Your outstretched arm also acts as an aiming guide. Create an angle with the thumb and forefinger and adjust this angle such that you frame the assailant's head while lining up the thumb horizontally on the assailant's throat.
4. Move the Guardian Angel unit to the firing position by extending your arm and positioning it firmly under your other thumb. If the threat advances, pull the trigger and fire the first charge.
5. If there is a single assailant, immediately aim again and fire the second charge. If confronted by multiple assailants, save the second charge for the next approach, should there be one.
6. Having fired the second shot, do not attempt to take care of the assailant. On the contrary, take advantage of their condition and move out of the danger zone as quickly as possible, and then call for help.

Extensive testing has proven that holding the Guardian Angel unit vertically (instead of flat) when firing ensures maximum accuracy. Proper grip position also allows the rear of the Guardian Angel to rest firmly in the palm of the hand, and naturally positions the tip of the index finger on the trigger. For best accuracy, pull trigger in a steady manner.

**Technical Data**

<b>Operation Mode:</b>	Trigger-operated percussion primer, automatic charge switching, pyrotechnic power driven piston.
<b>Length:</b>	4.3 inches (110mm)
<b>Width:</b>	2.7 inches (70mm)
<b>Content:</b>	Two separate charges of Oleoresin Capsicum inflammatory agent.
<b>Minimum Safe Discharge Distance:</b>	2 feet (.61m)
<b>Maximum Effective Range:</b>	13 feet (4m)
<b>Charge Velocity:</b>	90 mph (132 fps - 40m/s)
<b>Charge Volume:</b>	.2 oz. (6 ml)
<b>Inflammatory Agent:</b>	10% OC (oleoresin capsicum) with 2.4% capsaicinoids in entire solution.
<b>Operating Temperature:</b>	-4°F - 176°F (-20°C - 80°C)
<b>Trigger Resistance:</b>	6.6 lb (3 kg)
<b>Safety:</b>	Protects when dropped up to 5 feet (1.5m)
<b>Water Resistance:</b>	Splash-proof

**Warnings**

- Please read instructions and warnings carefully. Make sure they are understood before carrying, storing or using the Guardian Angel.
1. Not to be sold to minors or where Prohibited by law.
  2. Purchase, possession and/or use of this product may be regulated and/or prohibited by law in some jurisdictions.
  3. Federal law may prohibit you from transporting this product on a passenger aircraft.

**Warnings**

Federal law may prohibit possession of the Guardian Angel in certain federal and state buildings. Use for any purpose except lawful self defense may be a crime punishable by imprisonment, fine or both.

Avoid use where the inflammatory agent may harm children or persons with respiratory disorders. Do not discharge near infants.

**REMEMBER:** Your best self-defense is to avoid or deter attacks, rather than rely on any self-defense product. Avoid dangerous, isolated and poorly-lighted areas. Travel with others whenever possible. Use common sense and reasonable precautions to avoid situations where self-defense will become necessary.

It is recommended that civilian users attend a self-defense and/or pepper-spray course taught by a qualified instructor. Information on such courses can be obtained from many local firearms dealers, shooting ranges, or police departments.
